PERSONAL STATEMENT

Software Engineer with 4+ years building healthcare software, primarily backend development in .NET Core, with frontend experience in Angular and React. Comfortable across legacy and modern systems, from ASP.NET monoliths to Kafka-based microservices, including FHIR-based NHS integrations.

WORK EXPERIENCE

Software Engineer @ RLDatix

May 2022 – August 2026 | Skopje, North Macedonia

DCIQ - Capture, Carlton & PSIMS (November 2024 – August 2026)

- Worked across Capture and Carlton services as part of DCIQ's microservice-based healthcare risk management platform, contributing to frontend and backend feature development and bug fixes
- Contributed to PSIMS service responsible for processing Kafka-based Protobuf messages and converting incident data into FHIR (R3/R4) format for NHS UK integration
- Refactored the PSIMS codebase into modular class libraries, improving maintainability and separation of concerns
- Implemented FHIR R4 and LFPSE taxonomy standards across Capture and PSIMS services to meet NHS data compliance requirements

Tech: PHP, AngularJS, .NET Core Web API, Kafka, Google Protobuf, FHIR (R3/R4), MongoDB, SQL

DCIQ - DES Service (October 2023 – November 2024)

- Maintained DES, a .NET Web API and Angular reporting service where users schedule jobs to pull incident data from Capture and Carlton, filtered by things like incident ID or reported date

- Tracked down missing and inconsistent data in reports by inspecting the ETL jobs feeding the PySpark/MySQL reporting databases and running SQL queries to find where records were dropped, cross-checking results against Yellowfin BI dashboards

- Extended the data model via Entity Framework to support new reporting fields and downstream processing needs

Tech: .NET Core Web API, Entity Framework, Angular, SQL, MySQL, PySpark, Kafka, Yellowfin BI

Assure HRCase (July 2022 – September 2023)

- Contributed to both a legacy ASP.NET Web Forms monolith and a microservices-based architecture built with ASP.NET Core Web API

- Developed and maintained frontend features using React and JavaScript in a microservices-based application

- Refactored and migrated existing JavaScript codebase to TypeScript, improving type safety and maintainability

- Wrote unit tests using Jest and improved code reliability through testing

Tech: React, TypeScript, Jest, ASP.NET Web Forms, .NET Web API, SQL

- Actively contributed to Agile/Scrum ceremonies, including sprint planning, backlog refinement, and retrospectives

- Performed code reviews across multiple projects, ensuring code quality and adherence to best practices

---

Full Stack Developer Intern @ Semos Cloud

March 2022 – April 2022 | Skopje, North Macedonia

- Developed features for an internal employee rewards platform using Angular and Node.js (Express)

- Managed data persistence and queries using SQL in relational database environment

Tech: Node.js, Angular, TypeScript, SQL

EDUCATION

Bachelor's Degree in Software Engineering, European University - Faculty of Informatics

---

SKILLS

Backend: .NET Core, ASP.NET Core Web API, ASP.NET Web Forms, Entity Framework Core
Languages: C#, JavaScript, TypeScript, PHP
Databases: SQL Server, MySQL,
Frontend: Angular, React
Software Engineering Principles: OOP, SOLID Principles, Design Patterns
Architecture & APIs: Microservices, RESTful APIs
Tools & Methodologies: Git, Scrum, Agile
